

FABER'S PRESTIGE HOODS AND INNOVATIVE NAUTILUS TECHNOLOGY ON DISPLAY AT THE MEBEL EXHIBITION IN MOSCOW

Milan, November 2017. Faber, the company that invented the kitchen hood back in 1955, is at the **Mebel 2017 Exhibition** in Moscow **until 24 November** along with other top-flight names in home furnishing. The event provides a perfect opportunity for Faber to present its designer hoods and its latest technology, including the **Nautilus** diffuser and the innovative **Steam Off** anti-condensation system, to the Russian and East European markets.

The hoods on display include Talika, the first ever hood to be installed perfectly perpendicular to the hob. Talika incorporates Faber's exclusive new **Nautilus** diffuser, which earns an Energy Efficiency Class A rating for the hoods that incorporate it.

This impressive achievement marks a turning point for kitchen hoods. Until only a few years ago, even the most efficient and advanced hoods could only manage Energy Efficiency Class C for an equivalent air flow. In addition to being efficient and technologically advanced, the Nautilus diffuser is also only 15 cm thick, allowing hoods to be installed in a precisely vertical plane.

The exhibition stand also features other prestige Faber hoods: **Corinthia**, the cylindrical hood that re-interprets classical style; **Lybra**, with its exclusive Up&Down technology and minimalist design that uses glass to lighten lines and structure; the clean and elegant-looking **T- Light**, with its original inverted 'T' design; **Pareo**, the hood with an elegant, modular, spiral design that lowers over the hob for perfect suction when needed, and finally **Chloé**, with its three-dimensional finish imbued with culture, history and tradition.

Mebel, the International Exhibition for Furniture, Fittings and Upholstery, is one of the world's most important events for the interior design and furnishing sector and will be held at the new Expocenter in Moscow.

Faber looks forward to seeing you at the "Forum" Stand, FC020.

FABER:

First formed in 1955 to process plastics and synthetic resins, Faber began producing kitchen hoods in 1958. The first ever Faber hood was made from Plexiglas. This was the beginning of what has since become the "Fabiano hood manufacturing zone". Passion and commitment to objectives allowed Faber to acquire a growing number of production facilities and expand from a small local company into a European and eventually a global industry. Active on four continents and with factories in Italy, Sweden, France, Argentina, Turkey, India and Mexico plus sales offices in Russia and the USA, Faber is one of the largest hood manufacturers in the world today. The Faber Group is industry leader in Italy, where one hood in two is a Faber hood. The company sells hoods on the international market under its own brand and under the names of local market leaders. As a result of continuous internationalisation and eagerness to take on new challenges, Faber today is a member of the Franke Group, the Swiss leader in kitchen systems. In 2016, Faber implemented a major rebranding. The new tagline, "Air Matters", emphasises the company's long-standing mission: to develop appliances capable to transforming air, optimising comfort and creating a new way of life in the kitchen.
